

GENT & CO.'S 'BRITISH' TELEPHONES

The unqualified success attending the manufacture and sale of our ordinary British Telephone (Fig. 389 below), has induced us to offer this design of Instrument in other forms, so that they are suitable for all purposes and situations.

SPECIFICATION.

Case, solid Walnut or Teak, highly finished.

Contacts. No friction springs are used. All contacts, including ringing key and automatic switch are platinum tipped.

Receiver, Double Pole Watch, with black or white front.

Transmitter, our K. D. Hunnings, with black or white mouthpiece.

Bell suitable for 150 yards, with hammer guard. Can be wound for longer distances, if required.

All Metal parts highly finished in Nickel or Lacquered Brass.

Complete with induction coil and lightning arrestor.

Table Instruments fitted with improved cord support to hold cord free of table or desk.

Every Instrument thoroughly examined and tested before dispatch.

"BUREAU" TELEPHONES.
"HOUSEHOLD" TELEPHONES.

The Interchangeable British Telephones are suitable for all general purposes where direct intercommunication is required. By putting switch on to the corresponding stud any instrument can communicate direct to any other instrument in the installation.

The switch can be left in any position without putting the instrument out of call—a necessary precaution to guard against carelessness by the user.
